

# UCS1412 : Database Lab

## Student Club Management System

Akash Kishore, Akshaya Mohan, Bhavya Jha - 18 5001 {014,017,035}

April 2020

---

### Aim

- Most colleges have a variety of clubs and extra-curricular activities offered to the students. The primary difficulty faced by students is the lack of awareness about these events and activities.
- This database management system aims to act as an efficient location and portal for all the information, announcements and events of a college club.
- Club heads can update the events and announcements through this system, and students can also access these details easily.

### Functions

- Club heads can add, delete and modify events and add and delete announcements of their respective clubs.
- Students can view the information belonging to their clubs.
- The number of members and attendees of each event are also recorded.

Refer to Figure 1 for the design.
